RE: Wilcox Oil Company Superfund Site – Residential Data Results for Ground Water

This letter provides you with a summary of the ground water data results for your property. Based on the data, the water produced by your well does not exceed the maximum contaminant levels (MCL) set by the Safe Drinking Water Act, the action level (AL), or the residential screening levels for tap water (RSL). The table provided below shows only the contaminants detected in the water and compares the concentrations to the MCL, AL, or the tap water screening level if there is no MCL. As you can see, the concentration levels detected in your water do not exceed the MCLs, AL, or the tap water screening numbers. Based on these results, the water is safe to drink.

Thank you for your continued interest and support for this project. We would like to follow-up with you to discuss the data presented in this letter and answer any questions that you may have. We will contact you by phone to schedule a time that fits your schedule. In the interim, should you want to talk with us, please contact me at 214-665-8143, or 1-800-533-3508, or contact Todd Downham, Oklahoma Department of Environmental Quality at 405-702-5136.

Sincerely,

Katrina Higgins-Coltrain
